

STATEMENT ON PACKAGING USED

Wentylatory WENTECH Sp. z o.o. hereby declares that, in the course of fulfilling orders, it uses transport packaging in the form of wooden pallets intended for the protection and transportation of manufactured products, in particular fan impellers and fan cases.

1. Material

The pallets are manufactured from wooden components, in particular boards and timber sections. The wooden materials are purchased from external suppliers, while the purchasing documentation and available information concerning the material, its origin and IPPC marking are retained in WENTECH's documentation.

2. Packaging design and selection

The pallets are individually manufactured, taking into account the dimensions, weight, geometry and method of securing the product to be transported.

The design, dimensions, as well as the number and cross-sections of the wooden components are determined on the basis of technical documentation. The quantity of material used is limited to the level necessary to ensure the required stability and protection of the product during transportation. No structural components are used unless required by the function of the packaging.

3. Documentation and traceability

A technical drawing is prepared for the pallets manufactured. The drawing is linked to the relevant order/case number and stored in WENTECH's electronic documentation.

The documentation enables the applied design solution to be linked to a specific order and allows the manufactured pallet to be reproduced on the basis of the documentation.

4. Material management after use

The primary material used for the pallets is wood, which, after the end of its service life, may be reused, recovered or recycled, depending on its condition and the applicable method of management.

WENTECH fulfils its obligations concerning packaging and packaging waste in accordance with applicable legislation, including obligations fulfilled through a packaging recovery organisation.

5. Reference to PPWR

The above solutions are implemented taking into account the requirements of Regulation (EU) 2025/40 of the European Parliament and of the Council on packaging and packaging waste (PPWR) applicable to wooden transport packaging.

This document constitutes a statement concerning the type and use of transport packaging and does not constitute an EU Declaration of Conformity within the meaning of Regulation (EU) 2025/40.
